

# Head lice alert – what do you do? Your checklist in serious situations!

## 1. Treat

Treat the patient's head as quickly as possible with mosquito® med Head Lice Shampoo 10 or mosquito® Head Lice 2in1 Fluid.

## 2. Family

All members of the family must be carefully checked for nits and head lice and should also be treated with mosquito® med Head Lice Shampoo 10 or mosquito® Head Lice 2in1 Fluid on a precautionary basis.

## 3. Laundry

In order to ensure that laundry is free from head lice, towels, hats, pillowcases and other linen must be washed at a minimum of 60 °C. Alternatively you can use mosquito® Head Lice Detergent, which will remove head lice from your washing at temperatures as low as 30 °C.

## 4. Environment

Non-washable objects (such as car seats, couches, mattresses, cycling helmets, etc.) should be sprayed with mosquito® Lice Environmental Spray to kill off any louse infestation, then allowed to dry and vacuumed clean.

## 5. Notify

You must notify kindergartens, schools and all persons with whom your child comes in contact. This can help stop the further spread of head lice.

## 6. Check

Afterwards carry out daily checks. If you find any live head lice, you must immediately repeat the treatment with mosquito® Head Lice 2in1 Fluid or mosquito® med Head Lice Shampoo 10. Even if you do not find any more head lice - you must repeat the treatment after 7 to 10 days.

## 7. Protect

mosquito® Head Lice 2in1 Fluid not only allows you to effectively treat a head lice infestation, it also protects the sufferer from reinfestation for up to 3 days after treatment. The product can therefore also be used in advance as a purely preventive measure against head lice attacks.
