

How to use mosquito® Head Lice Shampoo 2in1

mosquito® Head Lice Shampoo 2in1 is applied to dry hair!

Treat the hair in three steps:

Step 1: Apply the shampoo to dry hair

Wrap a towel around the shoulders and neck to prevent the product dripping onto skin and clothes. The amount to be applied largely depends on the length and thickness of the hair. Make sure that all the hair along its complete length is completely saturated with the shampoo. Likewise, all areas of the scalp must be treated. Take particular care to ensure that the areas behind the ears, at the nape of the neck and the temples are treated with sufficient amounts of shampoo. **mosquito® Head Lice Shampoo 2in1 can only work in areas where it is applied.** Make sure that no shampoo gets in the eyes, for example by covering them with a wash cloth.

After combing, leave the shampoo in the hair for at least 15 minutes without covering it (e.g. with a towel, hood, etc.). This is very important for a successful treatment.

Step 2: Wash out the shampoo

Apply a small amount of water to the hair and massage the shampoo into a lather. Then rise the foam out using luke warm water. Make sure not to get the foam in the eyes. Rinse the hair thoroughly until no shampoo remains. There is no need to treat the hair with a normal commercial shampoo afterwards.

Step 3: Comb the hair using a lice comb

A head lice comb is a special type of comb with tightly packed teeth. Start by applying the comb directly at the scalp and comb out the hair strand-by-strand. Each time you draw the comb through the hair, you should clean it with a cotton cloth or kitchen towel to remove any head lice or nits. Make sure that the hair is damp while you comb it out.

It is best to dry the hair using a towel. Do not use a hair dryer.

If the treatment is performed in the evening, make sure that the hair is completely dry before the wearer goes to bed.

Repeat the complete application after 7–10 days.

What further steps should you take?

- Notify the school, crèche or contact person that there has been a head lice outbreak.
- As a precautionary measure, treat all family members with mosquito® Head Lice Shampoo 2in1. Wash all clothing, bed linen and towels used at a minimum of 60 degrees or use mosquito® Detergent, which can be used at 30 degrees or more. Non-washable objects can be treated with the mosquito® Fabric Spray or can be stored in a tightly sealed plastic bag for at least 4 days.
