

Head lice alert – what do you do? Your checklist in serious situations!

1. Treat

Treat the patient's head as quickly as possible with mosquito® med Head Lice Shampoo10 or mosquito® Head Lice 2in1 Shampoo + Repellent.

2. Family

All members of the family must be carefully checked for nits and head lice and should also be treated with mosquito® med Head Lice Shampoo10 or mosquito® Head Lice 2in1 Shampoo + Repellent on a precautionary basis.

3. Laundry

In order to ensure that laundry is free from head lice, towels, hats, pillowcases and other linen must be washed at a minimum of 60 °C. Alternatively you can use mosquito® Head Lice Detergent, which will remove head lice from your washing at temperatures as low as 30 °C.

4. Environment

Non-washable objects (such as car seats, couches, mattresses, cycling helmets, etc.) should be sprayed with mosquito® Head Lice Fabric Spray to kill off any louse infestation, then allowed to dry and vacuumed clean.

5. Notify

You must notify kindergartens, schools and all persons with whom your child comes in contact. This can help stop the further spread of head lice.

6. Check

Afterwards, perform daily checks. If you find any live head lice, you must repeat the treatment with mosquito® med Head Lice Shampoo10 or mosquito® Head Lice 2in1 Shampoo + Repellent immediately. Even if you find no more head lice – you must repeat the treatment after 7 to 10 days.
